Exact windows: fixed exposure and noise, rank 24; unconverged endpoints
Five graphs × two starts; starts averaged within graph; means ± graph SE
A Raw norms at final endpoint
Raw norm
Degree (geometric bin mean)
Window 1
Window 2
Window 5
Window 10
B Balanced norms at final endpoint
Balanced norm
Degree (geometric bin mean)
C Upper-degree change during optimization
Highest minus preceding bin, balanced norm
L-BFGS iteration (not SGD epochs)
D Every fit's factor-gradient residual
Maximum absolute gradient component
L-BFGS iteration (not SGD epochs)
