Same graphs, uniform exposure and fixed stationary negative noise
Five graphs × two starts; means ± graph SE; check endpoint stability
A Exact context specificity
Context KL (nats)
Degree (geometric bin mean)
Window 1
Window 2
Window 5
Window 10
B Trained balanced norms
Balanced center norm
Degree (geometric bin mean)
Window 1 (0/10 stable)
Window 2 (0/10 stable)
Window 5 (7/10 stable)
Window 10 (10/10 stable)
C Paired upper-degree declines
(Preceding bin − highest bin) / preceding bin
Window length
Context KL
Trained norm
D All starts across continued training
Highest minus preceding bin, balanced norm
Continuation block (up to 250 iterations each)
