Exposure and context interventions for norm turnover
A Exposure interventions
positive center updates / epoch
degree
β = 0
β = 0.33
β = 0.67
β = 1
held out: t = 3 × 10⁻⁴
B Intended context KL
D_KL(T_i^(λ) ‖ q)
λ = 0
λ = 0.33
λ = 0.67
λ = 1
C Norm response to exposure
raw center-vector norm
D Mixing removes the falling limb
E Exploratory held-out fit
actual held-out curve
exploratory exposure-matched fit
F Exploratory peak shift
degree at peak norm
actual
exploratory fit
subsampling threshold t
